Explore this interactive brochure to find more information about the products and services of Sealed Air Shrink Packaging. We are eager to answer any questions you may have about the products and equipment listed. You may email us at shrinkpackaging@sealedair.com or call us at 866-773-4567.

For more than half a century, Sealed Air Shrink Packaging has been the leader in technological advancements in engineered performance shrink films. Our passion for innovative thinking balanced with our team of packaging engineers has led to unparalleled packaging breakthroughs.

While others may offer piecemeal answers to packaging needs, the Sealed Air Total

Solutions Systems Approach delivers all-encompassing systems and solutions – from our superior films, equipment systems and field technical support to package design, and a distribution base that doubles the size of most others in the industry.

We help our customers solve every day challenges and operate their businesses more efficiently so that they can be more profitable. Explore our solutions in the table of contents on the left to find out more information or contact your local Sealed Air Sales Representative.

Browse us on the web at sealedair.com or for Sealed Air Distributors you may locate us at myshrinkpackaging.com.

Materials YOU CAN COUNT ON**Cryovac® CT-301 Shrink Film*****Making Your Life Easier***

Cryovac® CT-301 isn't just a new, thin film – it's a technology! Cryovac® CT-301 is a high performance film technology that has revolutionized our ability to down gauge while maintaining performance characteristics of other shrink films up to twice as thick. With proven versatility across a broad range of shrink equipment, this 30 gauge shrink films provides exceptional attributes such as enhanced seal strength, increased durability and retail ready optics and clarity. Longer roll length offers increased operational efficiency and the ultra thin structure is the ultimate in source reduction and reduced carbon footprint.

- Performance – 50-60 gauge properties in a 30 gauge film
- Improved yield – longer rolls, improved uptime, fewer changeovers
- Unique combination of strength, tear, and burn resistance properties
- Logistical, storage, and administrative efficiencies per package

Materials YOU CAN COUNT ON**Cryovac® D-955 Shrink Film****Market Leading Film for Over 25 Years**

Cryovac® D-955 is the most versatile and reliable shrink film on the market with the largest spectrum of applications. In addition to being the ideal film for unusually shaped objects and heavy products with sharp edges, Cryovac® D-955 film is unmatched for multi-packing applications.

- High performance impact, tensile and trim seal strength
- Retail ready clarity and gloss
- Seals well on thermal, trim and electrostatic systems
- Wide range of thickness available (52g – 150g) to accommodate various application requirements

Materials YOU CAN COUNT ON**Cryovac® D-940 Shrink Film****Easy-To-Use Soft Shrink Film**

Cryovac® D-940 soft shrink film allows you to package soft goods without the buckling and distortion that can turn shoppers off at the point of sale. Since this film conforms to odd shapes, it creates a beautiful package for hard-to-package products.

D-940 is ideal for shrink wrapping notebooks, school supplies, and printed or converted paper products. It is ideal for products packaged in lightweight chipboard trays or containers that normally buckle when wrapped with most shrink films. Low temperature shrink ability also allows wrapping of heat- sensitive products such as thermal paper tapes and vinyl products.

- Very low shrink force
- Wide operating window
- Designed to run at speeds up to 10-90ppm
- High free shrink at low temperatures

Materials YOU CAN COUNT ON**Cryovac® LD-935 Shrink Film****Heavyweight Performance with
Lightweight Packaging**

An ultra-thin cross-linked polyolefin shrink film that delivers heavyweight performance with reduced packaging cost. LD-935 is ideal for multi-packing bakery items, office supplies and other consumer goods that don't need the bulk of heavier films.

- Great optics and shrink characteristics deliver "second skin" package appearance
- Long roll length reduces changeover downtime
- Exceptional strength and capability in a thin film

High-Oxygen and Aroma Barrier Film

Cryovac® BDF2001 is a multi-layered, co-extruded polyolefin shrink film with high oxygen and aroma barrier properties. This film has been developed to protect the integrity of a wide range of perishable and non-perishable products.

- Prevents the migration of unwanted aromas and flavors – in or out
- Protects odor-sensitive products
- Contains strong odors within a package

Materials YOU CAN COUNT ON**Cryovac® D-955TK Shrink Film*****The No-Skid, No-Slip, High Tack Film***

Expanding the D-955 technology platform, Cryovac® D-955TK is the next generation shrink film with an asymmetrical construction. One side has the slip of standard D-955 and the other side is tacky which allows excellent adhesion for labels, hang tabs and branding.

In addition to the benefits and features of our standard Cryovac® D-955, D-955TK offers a no-skid, no-slip, high tack surface.

- Optimizes hang tab and label adhesion for retail display applications
- Allows for elimination of stretch wrap in pick-and-place operations
- Provides a “clean” surface for ink jet and print converter operations
- Microwave safe and FDA approved
- Enhances pallet stacking / stability

Materials YOU CAN COUNT ON**Cryovac® MPD Shrink Film**
High Speed Film

Designed for applications requiring maximum retail presentation, MPD-2055 is a multi-layer, non cross-linked structure engineered specifically for high-speed packaging applications.

- Clarity and gloss enhance merchandising and presentation appeal
- Excellent machinability on all systems from manual through automatic equipment
- Stiffness allows for clean tracking on high-speed systems
- Quick sealing capability to accommodate packaging speeds up to 200+ PPM
- Ideal for bulk packing requiring direct contact with bundling films
- Can be printed, eliminating the need for secondary packaging

The sister film of MPD-2055, MPD-2100 is also a multi-layer, non cross-linked structure designed for high-speed equipment. MPD-2100 addresses additional application needs required by the market.

- Excellent contact clarity.
- Enhanced hot pack-off slip for easy shipper loading
- Strongest, most reliable electrostatic lap seal available
- Ideal for freezer applications

Materials YOU CAN COUNT ON**Cryovac® Xenith3 Shrink Film****Low Temperature Shrink
Without Compromising Strength**

Cryovac® Xenith3® is the result of breakthrough technology that combines low temperature shrink without compromising strength. It is easy to use, which means it seals easily, shrinks easily and runs well on a broad range of equipment systems. Its unmatched clarity, gloss and sheen ensure that products are clearly visible to consumers and its strength enables products to arrive at the store in the same condition that they are shipped. This toughness permits products to withstand the rigors of retail stocking and consumer handling, while maintaining strong visual appeal.

- The strongest soft shrink film available
- Exerts low shrink force against your product
- Shrinks at significantly lower temperatures reducing energy costs
- Extremely versatile – accommodating a broad array of equipment and applications
- Has a very high percentage of “free shrink”
- Unsurpassed elastic recovery
- Is crystal clear with a high-gloss finish

Toughness Meets Versatility

CorTuff® Shrink Film

Sealed Air's Shrink Packaging business has developed a material with the toughness and versatility to go head-to-head with bulky, traditional packaging such as corrugate, heavy-gauge polyethylene, skin packaging, and clamshells – automating your packaging process increasing production rates and reducing packaging costs.

CorTuff® High-Abuse Shrink Film gives you a cost-effective packaging alternative with unprecedented impact strength that can be used as a primary shipping option and still maintain retail shelf appeal.

- Maximizes product protection
- Minimizes consumer tampering
- Strongest shrink film in the market
- Excellent retail shelf appeal

Equipment YOU CAN COUNT ON**Shanklin® Semi-Automatic L-Sealer Equipment**

The Shanklin® Semi-Automatic L-Sealers are built for applications that require packaging line speeds approaching those of fully automatic sealers, but where equipment cost is a factor or where the product does not lend itself to automatic handling. All models feature automatic sealing cycle, automatic package discharge, EZ load unwind.

- Simple - Easy to set up and maintain
- Rugged - Ensures years of efficiency
- Versatile - Easy to operate; easy to change over
- Innovative - Available with new SmartWire system that extends wire life and increases operator efficiency
- Semi-Automatic Operation
- Sealer Size - 15"W x 33"L
- Speed - 15 to 20 packages per minute
- Floor Space - 4.5' x 7' approximately
- Available with knife or wire sealing system
- Available for product flow feed from either right (S-24B) or left (S-24BL)

Equipment YOU CAN COUNT ON**Shanklin® Automatic L-Sealer Equipment****Model A-26A**

The A-26A features adjustable height seal jaws and can automatically wrap a wide range of products, including high profile or short length items, at speeds up to 35 packages per minute. EZ film threading is standard on the A-26A, which allows operators to move machine components for full access and visibility when threading film. It is also available in a USDA approved model.

**potentially faster with an optional speed up kit*

Model A-27A

The A-27A possesses all of the same features as the A-26A, but with slightly larger allowances in its maximum seal size, product size, and film width specifications. The A-27A is available in a USDA approved model as well.

Model A-28A

The large-capacity workhorse model of the A-Series, the A-28A features adjustable height seal jaws specially designed for products too large to fit through the A-26A or A-27A, and is equipped with a heavy-duty discharge conveyor to wrap much heavier product than most automatic L-Sealers can handle.

Equipment YOU CAN COUNT ON**Shanklin® FloWrap Series Equipment****Models: F-1, F-5, F-7 (side seal) F-3 & F-4 (overlap seal)**

Fully automatic Shanklin® FloWrap machines are continuous motion horizontal form-fill-sealers designed to wrap packages effortlessly and efficiently. Models F-1, F-5 and F-7 wrap product with neat trim seals on three sides of the package. Models F-3 and F-4 produce packages with trim seals on the ends of the package and a neat overlap seam on the bottom. Models F-1, F-3, F-4 and F-5 are available in USDA-approved models.

- Fully automatic operation - For maximum speed and efficiency; runs equally well at both high and low speeds
- Versatile - Handles irregular shapes; numerous features and options allow customization to application
- Solid performance - Produces 50-75 packages per minute (depending on application)
- Easy to use - Programmable controller with user-friendly touch-screen control panel for ease of operation and self-diagnostics
- F-1 and F-3 - Features belt infeed that accepts intermittently delivered and randomly spaced product, setting the correct spacing by controlling the infeed belt speeds
- F-4 and F-5 - Similar to F-1 and F-3, but with a flighted lug infeed conveyor that facilitates higher operating speeds
- F-7 - Similar to F-1, but larger in capacity and designed with heavy-duty conveyors to accommodate larger, heavier product

Equipment YOU CAN COUNT ON**Shanklin® Hy-Speed Series Equipment****Models: HS-1 & HS-3 (side seal) HS-2 & HS-4 (overlap seal)**

The Shanklin® Hy-Speed Series are top-of-the-line machines that give you the speed and flexibility you need to meet evolving production demands. Side-sealing models HS-1 and HS-3 and overlap-sealing models HS-2 and HS-4 offer a multitude of features, including fully automatic product handling, speeds from 100 to 180 packages per minute, and the ability to accommodate a wide range of product lengths and shapes. All are available in USDA-approved models

- Excellent value - The fastest, most versatile high-speed wrappers for the price!
- Smooth operation - Features fully automatic continuous flow operation
- Easy to use - Simple to set up and maintain; designed for quick, easy size changeovers; features user-friendly color touch screen controls
- Built to last - Rugged 3/4-inch-thick aluminum frame
- Versatile - Runs equally well at both high and low speeds; capable of handling a wide range of packages; can be used with virtually any type of film (depending on sealing system)
- Innovative - Features new SmartWire system that extends wire life and increases operational efficiency
- Customizable - Wide variety of options and accessories allow you to customize your Hy-Speed wrapper precisely to your application

Equipment YOU CAN COUNT ON**Shanklin® In-Feeds**

A wide range of automatic product feeding systems is available for any of the High Speed Wrappers. We offer both continuous flow infeeds and multipacking infeeds, which accumulate and/or collate and feed groupings of product into Shanklin® Shrink Packaging Machines.

Continuous Flow Infeeds

As the speeds of horizontal Form-Fill-Seal machines increase, the mechanism that feeds the products into the wrapping machine becomes an increasingly important component of a successful packaging line. The infeeds shown here feed product into Shanklin® Packaging Machines while maintaining a truly continuous flow of product to and through the machine. The line of product waiting to be wrapped is free from the harsh start-stop motion associated with many product feed systems, and product flow is smooth and in a straight line.

Synchronic Infeed

The Shanklin® Synchronic Infeed uses a control conveyor and infeed conveyor similar to the Harmonic Infeed, described below, but it is designed to feed any Shanklin® High Speed Automatic Wrapper. The flighted conveyor of the machine is retained, and a sophisticated control system senses the location of the infeeding product and adjusts it automatically so that

Equipment YOU CAN COUNT ON**Shanklin® In-Feeds****Synchronic Infeed continued**

the product will be deposited between the flights of the wrapping machine's infeed conveyor. Speeds exceeding 200 products/min. have been achieved with this infeed.

The sophisticated control system of the Synchronic Infeed permits feeding of multiple products into a single flight space for in-line multipacking.

Harmonic Infeed

The Shanklin® Harmonic Infeed is installed on Shanklin® HS-1, HS-2, F-4 and F-5 Wrappers in place of the flighted infeed conveyor. The Harmonic Infeed feeds product at the proper rate to produce the proper spacing between products. Photocell controlled end seal jaws seal the film between the packages automatically. A special Shanklin® Infeed Conveyor (recommended accessory) feeds product into the Harmonic Infeed. Factory modifications to the Harmonic Infeed permit groupings of product to be fed either intermittently or continuously.

Harmonic Infeed - Side Belt

The Shanklin® Harmonic Infeed is an optional side belt model for applications that cannot be controlled by the overhead belt on the standard model. This same configuration is available as an option for the Synchronic Infeed.

Equipment YOU CAN COUNT ON**Shanklin® In-Feeds****Timing Screw Infeed**

The Shanklin® Timing Screw Infeed can be used to feed product into the flighted infeed conveyor of any Shanklin® High Speed Wrapping Machine. It is particularly suited for round product (cans, jars, etc.) or product with rounded corners. This infeed can be configured to accumulate groupings of product for synchronized delivery to the wrapping machine.

F-1M and F-3M Multipacking Infeeds

Use alternating stops on the infeed conveyors to accumulate groupings of product and then release the groupings automatically into the wrapping machine.

Wide Flight Bar Infeed

Where maximum versatility with minimum changeover time is a primary concern, a manually fed infeed conveyor is often used. The Shanklin® Wide Flight Bar Infeed is ideal for this purpose. Product is placed between the flight bars and is carried into the wrapper automatically. Adjustable side guides are quickly set for the width of the products. This infeed is also designed to feed single products and irregularly shaped products.

Other

The Synchronic, Harmonic and Timing Belt Infeeds above can be modified for multipacking operations.

Equipment YOU CAN COUNT ON**Shanklin® L-Sealer Model M-22**

The Model M-22 Automatic Multipacker consists of a specially modified S-24C High Production L-Sealer on which an automatic right-angle accumulating infeed has been installed for orienting and grouping a series of products.

The basic components of the infeed are a product feeding conveyor, an accumulating conveyor, and a specialized right-angle inserting unit for feeding the grouping of products into the sealing areas. Available accessories include right-angle transfer mechanisms, product up-enders, product up-stackers, and special product- accumulating conveyors.

- Maximum Bundle Size - 15"W x 15"L x 8"H 15"W x 24"L x 8"H multi-stroke)
- Fully Automatic Operation
- Speed - 10 to 15 bundles per minute
- Floor Space - 5 1/2' x 8 1/2'*

Equipment YOU CAN COUNT ON**Shanklin Omni® Form-Fill-Seal Wrappers****New Platform Combines Versatility, Technology and Performance**

The Omni® form-fill-seal wrappers redefine traditional shrink packaging equipment with innovative new features like modular plug and play infeeds, advanced control network, and dual product flow configurations. Designed for maximum packaging flexibility and ease of operation, the Omni® begins the next generation of shrink packaging equipment.

- Modular plug and play infeeds
- Servo motion-control technology
- Global platform - Metric fasteners - Designed for CE compliance
- Large package size sealing capacity
- Package set-up storage capability
- New control network provides automatic system configuration and diagnostics
- Available right-to-left or left-to-right production flow configuration

Equipment YOU CAN COUNT ON**Shanklin® Triumph® TR-1 Equipment**

The Shanklin® Triumph® automatic form-fill-seal wrapper is a perfect midrange solution for all those applications that require more advanced features than an L-Sealer, but not quite as complex as those on a High-Speed Automatic Wrapper. Proudly made in the USA, packed with a huge list of standard features and very affordably priced, the Shanklin® Triumph® is easily one of the best shrink packaging values available on the market today.

- Flexible - Generates product spacing on the fly
- Fast - Can process up to 60 packages per minute
- Versatile - Maintains the right-to-left product flow direction of an L-Sealer but can be operated from either side
- Easy setup - Product changeover facilitated by digital read-outs and up to 25 package parameter recipes
- Easy to use - Fully automatic operation; user-friendly touch-screen interface, reduced operator training time
- Compact - Drop in replacement for most L-Sealers (footprint approx. 5 x 8 feet)

Shanklin® Tunnels

Unlike other shrink tunnels, in which improperly controlled air can produce disappointing results, Shanklin® shrink tunnels feature carefully controlled air velocity and temperature that are maintained throughout the tunnel for optimum film shrink.

- Versatile - Line easily meets such challenges as "problem packages," keeping up with high-speed wrapping machinery, or using difficult-to-handle shrink films.
- Durable - Heavy gauge steel exteriors and corrosion resistant interiors for long-lasting performance.
- Innovative - Designed to deliver heat to film rapidly for minimal heat exposure to product; tailors air temperature and velocity to favor the wrapping film for the best possible shrink.
- One-Year Warranty - Our commitment to reliability and our continued assurance of quality.

Over the years, we've developed an extensive line of shrink tunnel solutions engineered for virtually any application. There's a Shanklin® shrink tunnel perfect for your needs.

SUSTAINABILITY & SHRINK PACKAGING

A *Partner* You Can Count On

Maximum Performance, Minimal Carbon Footprint

Sealed Air has always recognized the importance of the environment. Our history of product and process innovation reflects this long-term commitment. Intelligent package design helps reduce the volume of our waste stream. Recent efforts of our 35 global Packaging Design and Development Centers eliminated two million pounds of packaging, while maximizing cost effectiveness and product protection. Less material per pack means smaller packages, reducing the number of truckloads required to ship and the associated transportation impact.

Our history of innovative source reduction within our films and manufacturing facilities has allowed

us to provide more efficient solutions for our customers with the lowest possible environmental impact.

By using like material recycled content in select shrink films, we are also reducing the amount of waste that is being sent to landfills. Our shrink films can be placed into the recycle stream for use in other products.
